

Proposed Wall at 11705 Olympic View Drive

The proposed wall will be constructed of 10-inch thick reinforced concrete. At the lowest point on the south end, the wall will be exposed a maximum of 10 feet above grade.

On the north end, the wall will be no more than 6 feet exposed.

Because a pool will eventually be installed, a 4 foot fence or guard rail will be required on top of the wall.

The height of the proposed wall will continue at a level 2 feet 6 inches lower than the wall shown in Photo 1.

Photo 1

The top of the proposed wall will align with the top of the second block visible in Photo 2.

Photo 2

Photo 3 shows an example of an existing wall that continues along the three lots to the north of the subject property. This illustrates the continuity and compatibility of the proposed wall design with neighbouring properties.
